PREFACE

The Australian Standard Commodity Classification (ASCC) has been developed by the ABS to facilitate the compilation of comparable Australian production, import and export commodity statistics, and to serve as a framework within which ABS commodity and activity classifications are integrated and maintained in a coordinated manner to promote comparability between them and with relevant international standards.

This classification is published in two parts. Part 1 includes the introductory material, the summary classification and various keys linking production, import, tariff and export commodity items to ASCC Items.

This part (Part 2) includes the 'Detailed Classification' which lists standard, i.e. ASCC, items under industry of origin headings (which constitute the broad structure of the ASCC) and shows, for each ASCC Item, its component production, import and export commodity items. (For information on the nature and structural characteristics of the classification and the standard commodity items, reference should be made to the introductory material included in Part 1.)

ASIC Industry of Origin: DIVISION C : MANUFACTURING - contd
CLASS 3164 : METAL COATING AND FINISHING

- Note: This ASIC industry of origin has been created separately with no ASCC items listed under it because:
- (i) separate, specific, information is not available on the commodities which originate only from industry class 3164 thereby preventing the creation of meaningful and viable standard items for these commodities;
 - (ii) the ASCC, at present, relates only to transportable goods, and a major proportion of the activities primary to this industry is involved in the provision of services (e.g. engraving, polishing, plating and heat treatment of metals);
 - (iii) the creation of this separate industry of origin category permits the presentation of standardised commodity items for the other important metal industry classes.
